

Task 1

Suppose one user 'Mohan' wants to register then he has to fill the

1.Name 2.Email 3.Password .

So, you have to verify Mohan's email by sending one email.

Inputs:

Name Mohan Kumar

Email mohan123@gmail.com

Password *****

Note: You have to store the user information in the mongoDB database.

Hint : Use the nodemailer module.

Steps to perform the same

npm init

node index.js

call POST api to the route 'localhost:3000/' along with the required body as mentioned in the task using POSTMAN

mail will be sent to the entered user email !!

The data of the can be seen on the api endpoint 'localhost:3000/api/users' to verify the data
